

About:

Soft Sound® Tiles are the perfect building blocks to easily and affordably enhance aesthetics and acoustic performance across interior spaces. Made from Arktura's Soft Sound® acoustical material, Soft Sound® Tiles can be simply adhered to wall surfaces to absorb sound while creating limitless design opportunities. Mix and match its five standard sizes and dozens of color options, including wood textures, to create the best design for your project. Tiles can also be field trimmed to effortlessly adapt to surrounding building conditions and create endless possibilities.

SOFT SOUND® - Tiles

STANDARD WALL SYSTEM

+ STANDARD MODULES

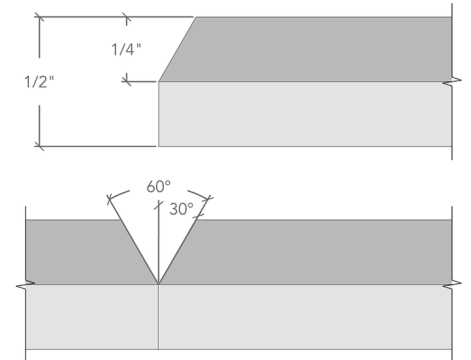

Soft Sound® Tiles come in five sizes that allow for a variety of configurations .
Arrow indicates direction of wood grain for optional Soft Sound® Wood Textures

*All dimensions nominal

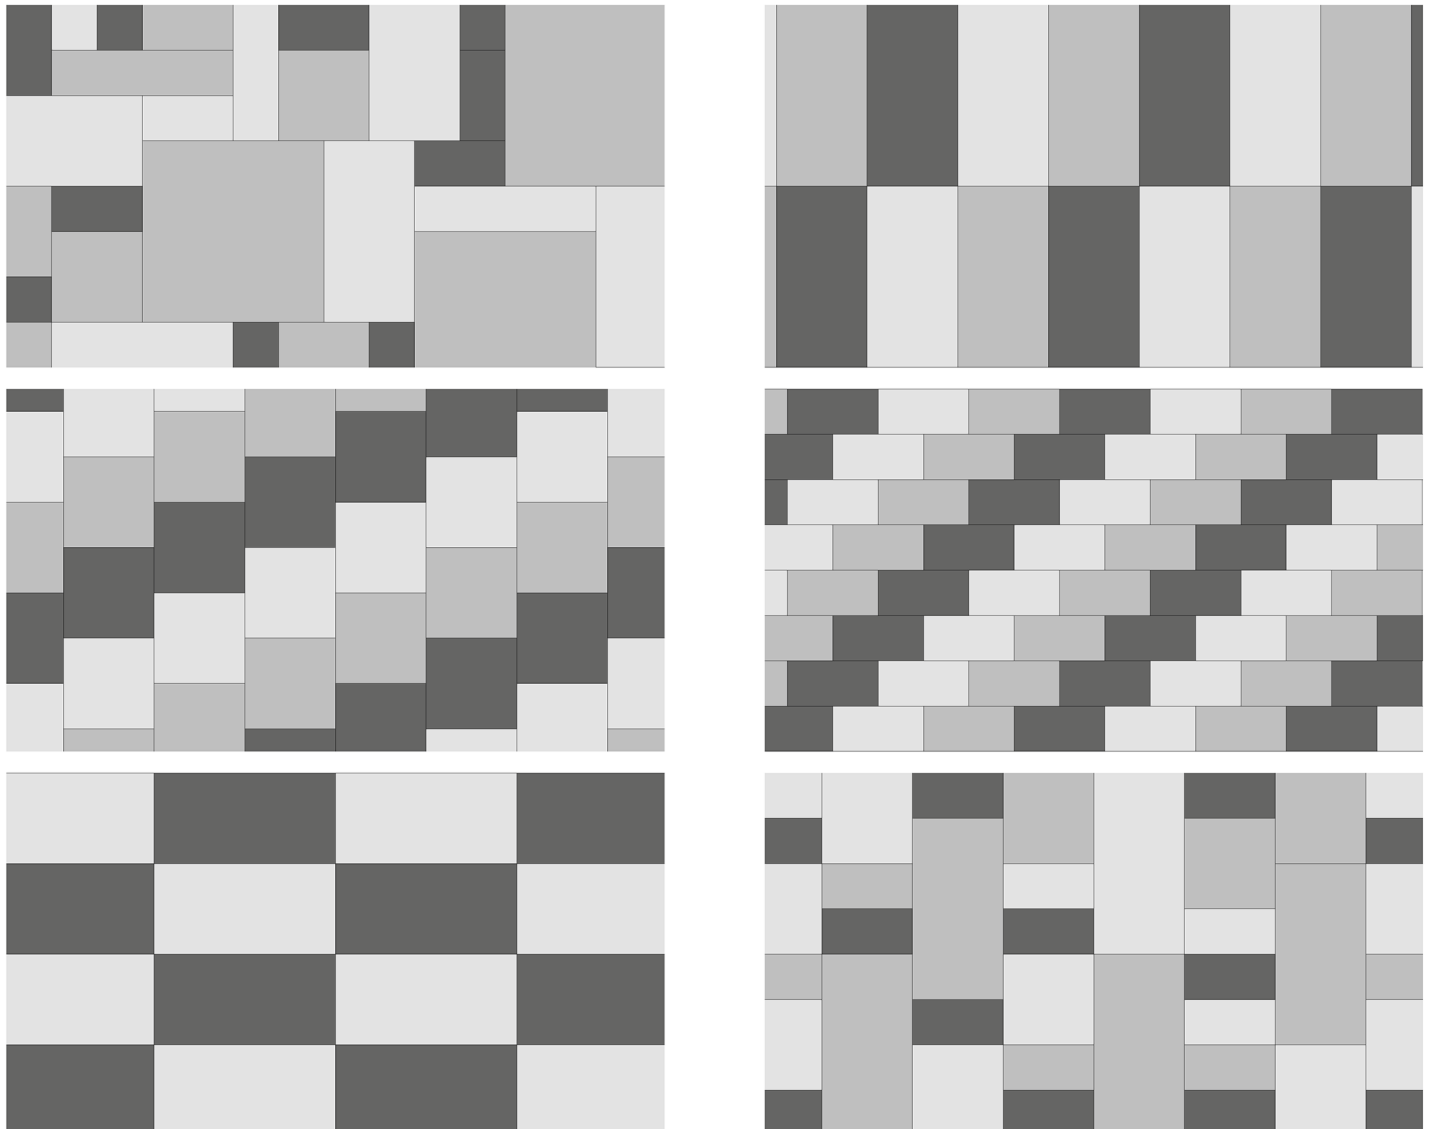

+ SECTION

Soft Sound® Tiles can be beveled at a 30° angle, creating a V-groove when modules are tiled together.

+ SUGGESTED ARRANGEMENTS

Soft Sound® Tiles can be installed with an air gap between the wall and the panels for higher acoustic performance.

*See Website for Soft Sound® Color Options and Wood Finishes
