SoundStar®

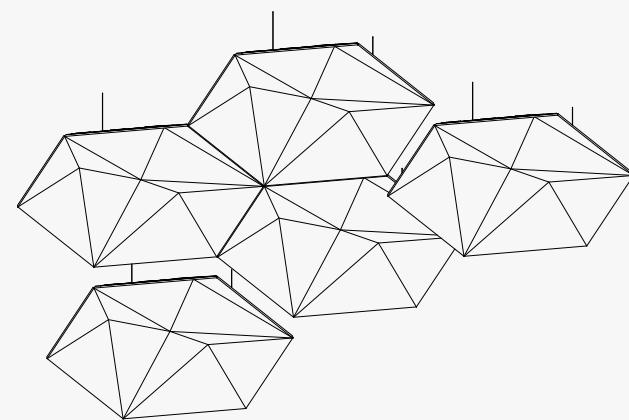

Ceiling **Clouds**

Fueling Possibilities®

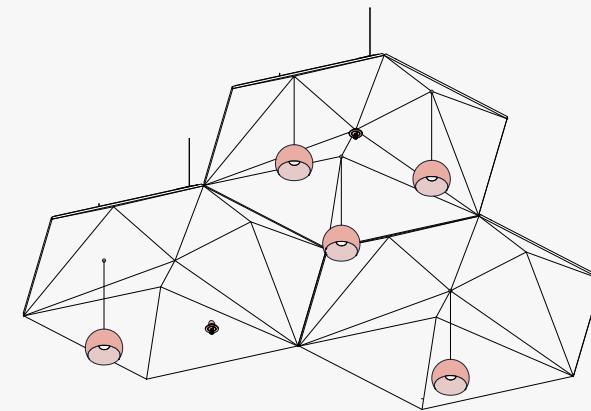

Our Key Features

SoundStar® ceiling system's hexagonally shaped cellular coffers offer a scalable way to add geometric dimensionality and disrupt sound's ability to travel across a space. Each module is comprised of angled surfaces made from our Soft Sound® acoustical material (100% PET plastic with up to 60% recycled content) with a metal substructure. Choose from 12" or 24" deep modules, to mix and match as desired. Thanks to its flexible, modular configuration, SoundStar® can adapt to a range of spaces and design visions, to create a spectacular visual effect. The design and sound capturing capabilities of this system offer a fresh effective approach to high performance sound attenuation.

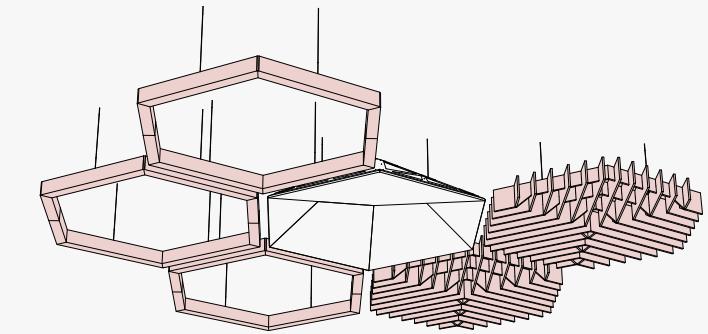

Dynamic Modules

SoundStar®'s unique hexagonal shape allows it to work in dynamic clusters that don't confine its modules to rectilinear spaces. SoundStar® works with irregular and regular spaces, clusters well in open areas, and can be suspended individually as an acoustic cloud.

Thoughtful Integration

SoundStar® can accept integration of lights and fire suppression systems through its vertices and voids. Simply select an open void in the SoundStar® module and field cut to integrate a fixture and add even more flexibility for integration.

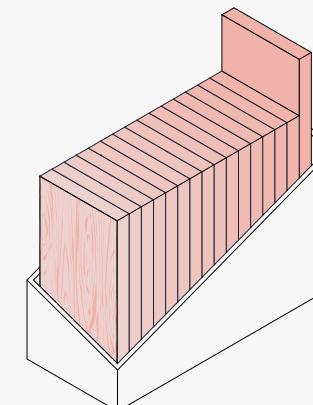

Compatible with Hexagonal Systems

SoundStar® is compatible with other hexagonal systems from Arktura, including SoftGrid® Hex and SoftShapes™ Hex to fully immerse any space in acoustic attenuation.

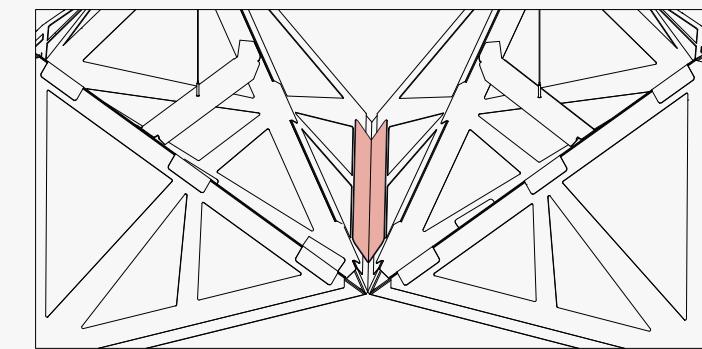

Reduce Noise & Enhance Acoustics

SoundStar®'s Soft Sound® material reduces the impact of noise from everyday annoyances like ringing, typing, and chatter resulting in a more pleasant and productive environment. SoundStar®'s material works in concert with the faceted design to help reduce and control reverberations and diffuse sound leaving a lasting impression at scales ranging from assembly halls to conference rooms.

Expansive Soft Sound® Library

Choose from a large library of Soft Sound® colors and wood textures. Mix and match colors to accent fins and complement the color scheme of your space.

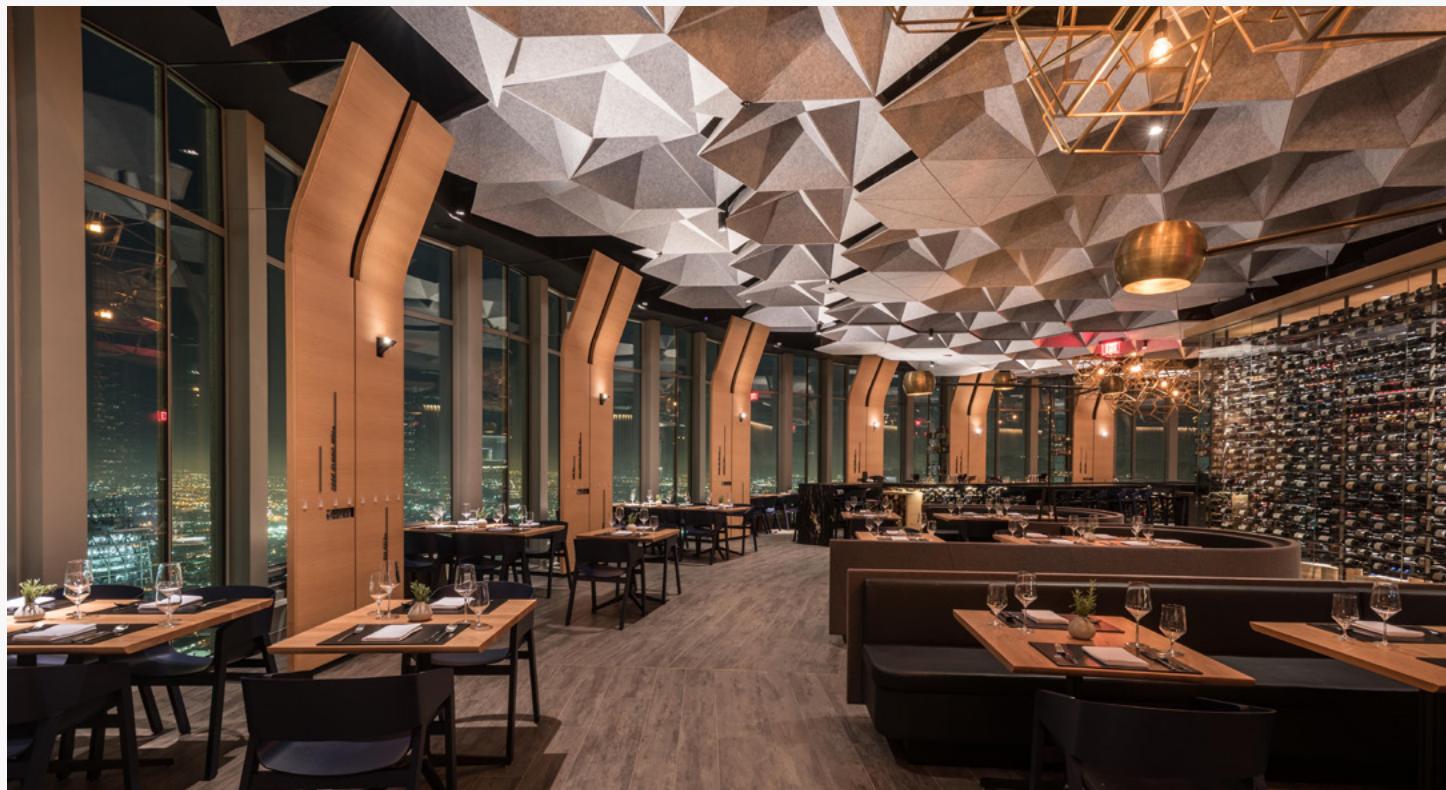

Seamless Connections

Connect SoundStar® modules seamlessly into clusters, at all adjacent points, with our module joining brackets.

3 Product Specifications

1 Understanding the System

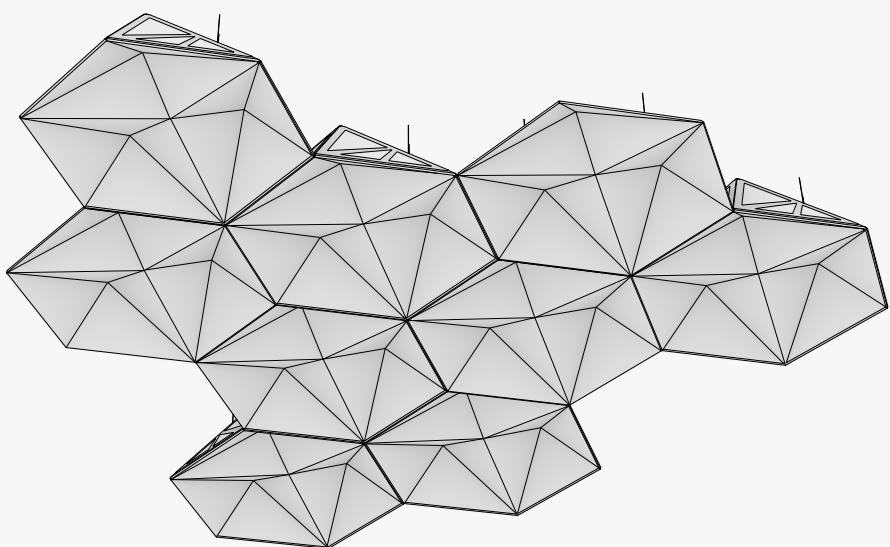

Standard Module

SoundStar® has two options available to choose from. Modules are available in 12" and 24" depths.

Multiple Modules

SoundStar® modules can be mixed and matched as desired for various depths. SoundStar® is also compatible with SoftGrid® Deca, Orbit, and Flux.

Combining With Other Products

SoundStar® is compatible with SoftGrid® Deca, Flux*, Orbit and SoftShapes™ Hex.

*Field trimming is required for SoftGrid® Flux

 * To combine SoundStar® with other products please contact your Arktura Rep. to request Product Installation Manuals

 Due to the nature of non-woven materials, light may pass through Soft Sound® in any thickness or color. A translucent appearance is most apparent in lighter colors and thin material when a light source is present behind the material. Arktura makes no claims or warranties about the material performing as opaque in any circumstance. To verify a products performance for light transmittance, a mockup of the specific intended use is recommended.
